

Empowering your colleagues to be your strongest asset in your perpetual endeavour to prevent data and information loss.

March 2021 - v1.0

We are passionate about sharing our knowledge and experience with you our clients.

For your data security and privacy strategy and program to be successful, we recommend that a security and privacy culture is nurtured through-out your organisation.

Your colleagues are your biggest asset in your perpetual endeavour to prevent data and information loss, but are also your biggest risk.

Human error unfortunately causes the vast majority of data breaches, and therefore it is essential that you provide your colleagues with suitable training on data security and privacy.

The following data security and privacy frameworks require that you and your colleagues receive data security or privacy training 'on-hire' and refresh training at least annually there-after:

- PCI DSS
- ISO27001
- GDPR (UK Data Protection Act 2018)
- Cyber Essentials and Plus
- IASME Governance
- SOC2
- NIST

We can help you in numerous ways to provide education, training and awareness to you and your colleagues, utilising some ready-made solutions as well as customised approaches to meet precise organisation's precise needs.

We also work with a number of associate providers of bespoke data security and privacy education and training solutions, so we can confidently say we have all options covered.

**Training and Awareness Framework** - We typically start by defining a security and privacy training and awareness framework.

Alongside your data security and privacy policies, this framework defines the content, approach and frequency for your data security and privacy training.

Techniques we can support you with include:

- Coaching and mentoring
- In-house Training
- External Training
- Toolkit development
- Distance learning and webinars
- Authoring of white papers and articles

All our education, training and awareness can be delivered remotely whilst government guidance encourages working from home\*.

I look forward to talking through the details of our education services with you as soon as we can, including the following areas of expertise:

- Education, Training and Awareness
- Incident and Breach Management
- Policy and Operating Standards
- Associate Services

I look forward to working with all our clients soon to improve your data risk management and information security governance and compliance programs.

Stuart Golding - Founder and CEO
